# IC201, 251 (CX171) HANDLING PRECAUTIONS

IC201, 251 (CX171) used for this unit are not MOS ICs, but it is necessary to handle them as same as MOS IC. Proceed the following steps when replacing them.

1. Maintain all the pins at the same potential by wrapping the IC in aluminum foil or other similar material (See Fig. 1).

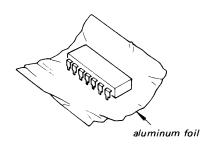

Fig. 1

2. Ground the work bench for static electricity (See Fig. 2) (Place a sheet of aluminum onto the bench.)

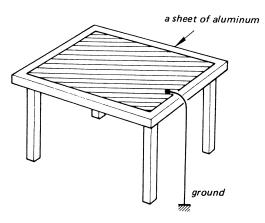

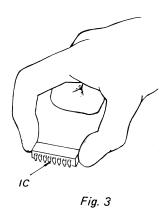

Fig. 2

3. If necessary to touch the IC direct, grasp the IC at a point other than the pins. Moreover, wear cotton gloves or a cotton finger sack. (Gloves made of nylon or other similar material are undesirable. The static electricity on your body can be easily discharged by wrapping a ground wire around your wrist.)

4. Short all the pins of the IC before beginning any work. Also ground the soldering iron.

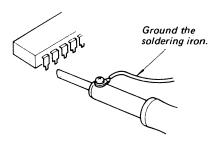

Fig. 4

5. After soldering the IC, apply a suitable adhesive to insulate terminals ① to ④ of the IC.
